1 ship is sexual erotic enjoying with its living tissue

first text

<https://archive.org/stream/TheLivingAndEnjoyingShiphull/shiphulllivingenjoying.txt>

shiphull material made of living plants thc cannabis, psilocibin mushroom
microalgaeship is sexual erotic enjoying with its living tissue it can give
and receive sensual pleasure it has possibilities to increase its blood
flow into certain areas where it is open too to body fluids from humans
animals plants compost as well as blood and semen and vaginal ejaculations
dna exchange via sexual intercourse but also trough caressing, stroking----
fertility rite humans putting penis into mother earth ---- fieldship
personality grows with its emotional, sexual, mental exchanges with both
its inhabitants and via internet withalso lifeships can come together,
exchange dna, enjoy in sexual intercourseship has nervous system similar to
animals and humans two ships can become one physical, reshape them from dna
exchange, via internet mentally but also via whole body sexual
intercourse-----the
evolution of mary the lifeshipperma and mary with maima shared the
admiration of mother natures mechanisms and workings, biological sexuality
and reproduction. if humans would want.... or ascende's thought ...if i
want to transcend into a being what has no need for killing eating
plants... if i want to become independent from mother earth... i better
start enjoying eating more for in the joy there lies the answer to

hungerhunger ceases in times of marrymentperma, maima, mary were joining in with their thoughts, mary: i feel too a sympathetic wave rising within me towards the goal of man- and womankind come full circle with the killing. and myself i could greatly profit from you perma and the animals what live within me... \$when your digestion would be mainly fine tuned smell, taste, hear, see, touchif you would live more from the aetheric energies like i use to power my antigravity propulsion drive...then my interaction with you could come to another level...ascende: you say if i, perma and the animals what live inside you, we eat less, but experience more, nourish ourselves with satisfactory sensual inputs... we might discover within ourselves a free energy, overunity antigravity mechanismstop killing eating plants but unite, merge, dance, cuddle with them ?mary: ya and cuddle i want too... even more i would like to enhance my dna of microalgae, cannabis, funghi psilocybin with your human dna what you can give to me with pleasure sensation of ejaculating into my bodylike maima who is made by flesh grown from your cells... i would like to ingest in a pleasure way your semenperma: may i also contribute to your quickening... your awakening with my vaginal ejaculation and my menstruation blood ?mary: oh yes, i would like that so muchwe all four enjoying orgasmic reunion in a physical bodily exercising manneri am sure i can direct my body fluids of living microalgae, cannabis essence and mushrooms into a warm mushy area with swelling bodies... so it too will provide you with my very personal formula, with a lifeships semen blood ecstasy fluidit might eventually be a possibility for all of us to reach this level where no one aboard is hungry...everyone drinking, soaking up through skin and genitals the other ones essence in times of highest pleasure coitusmaima: mmmh... like the nectar, we would enjoy is the diversity of your gene pool... and taste of semen and body fluids is pleasure food... i have not yet built genital organs... have you thought of the genital form yet maryhow i and you could rub each other most intimately ?perma: i feel moist between my legs and my vagina smells nicely... ascende would you like licking some of my juice right now ?ascende: with the utmost pleasure...mmmh... thats a tangy sweet fresh pussy juice i sense on my tongue...perma: please may i swallow your penis for your semenascende: wow of course...perma was very happy to take ascendes penis into her mouth, she instantly sucked and played with her tongue around the tip of ascendes penis... after a minute or two she tasted some fluid from the penis and continued sucking and fondling ascendes penis with tongue, teeth and whole mouth until he ejaculated into her mouth. she swallowed half of the semen and kissed maima with the sperm in her mouth... perma and maima having kissed intensely before.maima went down to perma's crotch where ascende still was kissing her labia and also anus caressing with his tongue. maima kissed ascende on his lips and shared some of this semen what she got from permas mouth where he had delivered it just moments ago.maima had swallowed before some half of ascendes sperm. now maima was indulging into permas dripping vaginal openingperma being now near climax when ascende inserted his again erect penis into her anus ... he had transferred some of her vaginal fluids with his mouth onto the anus and it was readily opening... perma being vaginal licked by maima and anally slowly filled and gently pushed by ascende... she reached out to the lifeship mary ... please mary unite with me before this coming orgasm ...

what spontaneously could grow extensions of herself in form of tentacles... three tentacles with openings were coming into the anus of ascende, one tentacle very thin was going into maimas nose to connect to her brain and another tentacle was seeking its way to permas mouth perma was so thankful she could close her mouth around marys extension... being caressed by tungs and penis and tentacle... her giving pleasure while feeling ascende enjoying both his anus being penetrated by mary tentacle as well as he being inside her darm bowels she roared loudly as the flood gates of her orgasms were opening... marys tentacles as well as maimas mouth were sucking up the in the orgasm released fluids. after this celebration of sexual orgasmic fluid exchange... mary too did release some of her essence via tentacles into maima and permas mouth and ascendes anus-- the interaction on board went much more physical... instead of talking many times of all them touched each other, cuddled together and or rubbed their swelling bodies saliva too exchanging in kisses was helping to come online with each other... feeling each others wishes, desires and intentions

2 ascende, perma and the magic pools in an alternative dimension and or a parallel timeline, ascende and perma were meeting for the first time in nature.

second text <https://archive.org/stream/ascendepermaandthemagicpools/magicpools.txt> <https://www.facebook.com/mayloveheal/posts/765212603502571> <https://www.facebook.com/ascendewithmarytheliveship/posts/651912038221528> <https://ia902509.us.archive.org/33/items/ascendepermaandthemagicpools/AscendePermaAndTheMagicPools.pdf> <https://archive.org/details/ascendepermaandthemagicpools> i was thinking about this material already last year at the wild river sense ... when i wrote this text <https://archive.org/stream/TheLivingAndEnjoyingShiphull/shiphulllivingenjoying.txt> (to understand the context i wrote it in, like ... the wild river place ... <https://archive.org/details/faschzweitaegundeinachtarsense>) some weeks ago i had this idea of it all possibly happening without industrial activity, with iron dust rubbed of from big rocks (the ones where it looks like some orange fluid flows out of them ...), i wrote in german about it at <https://www.facebook.com/mayloveheal/posts/761997393824092> ... but forgot today afternoon to mention the iron dust... mmmh... this text i wrote today being a parallel development to the story i wrote in 2007 <http://www.novlet.com/stories/passages/584> <http://archive.org/stream/ascende/ascende.txt> ascende, perma and the magic pools in an alternative dimension and or a parallel timeline, ascende and perma were meeting for the first time in nature. ascende being tired of waiting for the abundance scheme to arrive, tired of society postponing to do the obvious to save mankind from harming the delicate balance on mother earth even further. he was well read about alchemy and magic traditions as well as the esoteric possibilities where one does not

actually need the society to grow incounciousness but instead the practitioner itself shall create for him- or herself a space both physically and mentally emotional... a space what is most free of outer demands and allows the experimenter to dwell into the subjects of ones desire. in the case of ascende, he wished for himself and also everyone... a lifeship and a companion, an assistant. this way predestined he walked away from the city where he lived... walked into the forest, where he met perma. she herself was on a quest quite similar to ascendes wishes. her wish and goal was to find a space in nature where she would be undisturbed from other human beings. and there she would plant food and build a shelter for herself. with most respect for the wild setting, to intrude the least possible, to blend in with utmost elegance... so, wandering they both were, when they reached a wild little river where there was a big long rock in its middle. and in this rock then were several pools. fascinated from this sight, they both approached the pools from different directions. with their eyes mostly on the slippery ground of the shallow river, they noticed each other only just at the pools. a moment of silence followed their first eye contact... a silence where they innerly asked themselves about the meaning of this meeting... they both were set to start a new life in solitude, away from the desires of human company and the pressure of societies... and now this. so they started to smile at each other, guessing eventually their little mindedness and silly backward isolationism ways ... perma voiced first ... and i thought i could live a life in solitude now ... with the smile on her face morphing into a wide happy grin. ascende now said ... so was i on my way to the hermits sanctuary ... i guess we might evaluate our plans some more carefully ... having said that, he started to laugh out loudly... with perma joining in. it did not take long before they took off their clothes and without shyness bathed in the little river, showed each other their discoveries in plants, little animals, interesting nature signatures in the rocks... later this evening, they gathered wood to light up a fire. having found some fruits, leafs and roots they ate raw beside the warming fire, they both talked openly and extensively about their goals what they thought have led them here. being thankful for their meeting they both were, reading it even as a sign towards a perhaps not solitary future.... content about this day they lay beside the fire, holding each other softly and drifting into the otherworld. the next morning, neither of them wanted to leave this place, so they just stayed, continuing their fruit gathering, searching for edible leafs and roots, bathing, cuddling and fondling each other, orgasming all over the place in all kinds of sexual activities. having satisfied their hunger on each other a tiny bit ... ascende was summoning up his knowledge or guessings or speculations how possibly he would be able to will a lifeship into existence, or a companion... when he found himself watching the little animals in one of the pools, the algae threads... and suddenly it came to him... how about this pool serving as a magic cauldron, a vessel to work with, for the juicing of the great labour exited he started listing the possible ingredients in his mind ... my own urine as the most important one, as the connection between my body and the body of the lifeship and the companion... also to nurture the algae. then cannabis flower buds for their THC intelligence... mushroom strong in psilocybin powers... datura

wisdom... it all most untreated or as soft as possibly introduced into the pond. ideally. the cannabis and mushroom growing near and only their wind transported essence coming into the pond... but this perhaps later. for the beginning, i would have to start with a stronger more physical elixir ... of course it needs me to watch it many hours a day, let it enchant my mind and feelings with its graphics, changings of form and colour... regularly i would taste some of it, give some on my skin... wash my face and hands with it so that it both will impregnate me as well as my skin surface bacteria will join the pool.... as he was laying beside the pool, painting this inner picture of a noncooking, raw food style alchemical setting ... perma came back from one of her many walks alone gathering edibles. she was the one of them both who knew and or sensed most what could be digested easily. she saw his happy thinkings on his face expressions... and asked him about it while offering some berries and nuts. as he told her, she became interested ... and although her goals still were to live a simple life in a permaculture way ... there was a part in her what was fascinated by the idea of creating a new kind of living material. a material what would respond to ones desires and wishes. so she suggested to him that she would like to help... eventually their juices unified charged with joyful ecstatic sexual comings... she talking like this aroused them both so they rolled onto each other and into one of the pools, moaning groaning fucking licking and ejaculating into each other... vaginal ejaculation, semen, algae and water all over their bodies... they painted symbols and spontaneous forms onto each others bodies, abwechselnd licking some of it off, getting into heat again and ejaculating anew ... verstreichen it anew onto each other and washing themselves in the pools... what a start of the journey.....

.. <https://www.facebook.com/mayloveheal/posts/761997393824092> i was thinking about <https://www.facebook.com/mayloveheal/posts/759144314109400> ... where i envision a kind of raw food approach to alchemy in search of the next building material ... as i am still waiting for my very own personal spaceship what will allow me to travel everywhere and live autonomously with plants and fungus and bioreactors inside ... i got this idea for an ascende chapter ... so, here is some of it ... i wonder when or if i will write further, perhaps some times at the sense, because at the sense and schwarzwasser are some rockpools ... perhaps some more details will come to me about what possibly two beings can enjoy in with the natural alchemical pool....-----ascende, perma and the magical rockpool parallel timeline asce and perm stay around the rockpool wash themselves in it make love with in it dance meditate mix their urine together meditate and drink from it at the beginning they ate fruit and smoked and ate the herbs the mushroom also some cannabis flower buds and psilocybinoid mushrooms they lay into the pool-----the parallel timeline thing is ... some kind of explanation ... for a space and time where ascende and perma are both evolving themselves, their relationship and also the material .. with what perma will build her house with and ascende his lifeship ... this being parallel to the original story where the global society as a whole in an act of charity and empowering every human being donates a house, a lifeship or something similar to everyone allowing everyone to sustain her/himself ... in this parallel timeline it is not the society as a

mother/father figure what comes to the rescue or initiates change ... but the individual itself uplifts him/herself in community with fellows out of mostly own strenght and focus on the inner powersursuppenstyleauf der suche nach dem lebendigen wahren trunk und baustoffdas eisenerz zu schmelzen... wie im film princess monoke zu sehen, vertraegt sich nicht mit dem wald...hingegen an einem felsen wo rot oranges nach aussen tritt dies eisenhaltige gestein fein abzuraspeln ...dann zusammen mit psylocibin haltigen pilzen zusammenzumischen, fliegenpilzen, datura bilsenkraut, the kraeftiger hanf ... mit microalgen in 4 grad kaltem wasser aus der tiefe oder von einem gebirgswasserfall... alles sanft ineinander zuwirbeln bewegen mischen , in einer flachen zuvor mit reinem feuer gebrannten lehmmulde ... und diesen saft von regen und sonne, sterne, wind und gedanken gefuehlen zu informieren, es auszusetzen den einflussen von kleinstlebewesen auches dann zu kosten... auch den eigenen urin beizumischen als nahrung fuer die microalgen, ergaebe eine ursuppe, woraus der geistesforschende mensch sich dazusetzen koennte, zu betrachten sein spiegelbild bei sonnenschein, zu lauschen der regentropfen melodie... dies eine art von alchemischer rohkost exlixier suppen zubereitung, zur inneren erhoehung der konzentration, im austausch mit der materie, in intensiver sich in kommunion begeben mit dem heilbecken ... lange zeit daneben zu sitzen, daneben zu schlafen, sich bewegen ... eigentlich aehnlich dem feuer eines waldmoenchen asketen, ein tor in die innere welt, die unsichtbaren ebenen der existenz zu oeffnen und zu gestaltenauf einer praktischeren baulichen ebene, kann auf diesem sonnenerwaermten, sterneninformierten, von kleinstlebenswesen massierten fluessigkeiten brauen wege moeglicherweise ein naechster baustoff gefunden werden ... ein baustoff, lebendig, fluessig oder vielleicht auch ein bisschen zaehfliessend je nach verlangen, ein baustoff welcher auf gedanken des zubereitenden menschen reagiert, sich einstimmt, genaehrt von der eigenen dna, den informationen im urin des zubereitenden ... telepathisch ansprechbarer lebendiger intelligentes fluessiges gestaltungsstoffhaus, wohnung, fahrzeug, luftschiff, kleidung, bildschirm und zeichentafel ... esschale ... waeren moegliche formendie vorstellung des golem auch tritt auf, ein organisch, natuerlich gebauter gefaehrte naturroboter welcher einem lernend experimentierenden zur seite steht auf dem weg in die ewigkeit

3perma as well as ascende usually woke up, peed in the pool and sometimes did lie in them some minutes for a morning quicky just to jump out and hungrily searching for some berries or bananas ... but this morning, after peeing and fumbling each other

third text <https://ia902506.us.archive.org/33/items/>

ThankYouMotherJuicePermanentMotherFlow/photosynthesisandwings.txt

in the movie splice a being was portrayed what had dna from human and animal... it was female with lungs first and a long tails while the legs were tyrannosaurus like then transformed into ambhonian with gills... after that it had intercourse with a male human... what caused it to become male... and it could drive out its wings what were flesh like no feathers.... as a male amphibian flying one it impregnated its semen to the woman who gave her dna into the experiment if i switch to ascende perma bathing in the magic pools eating drinking informations from plant leaves microalgae each others urine semen female ejaculation fluids.... one could wonder what time it may need untill the humans have blended into tune of the pool... ascende was asking perma if she could please stick her left middle finger into his behind while she would suck his semen out from his balls... mmmh she answered... i am hungry for your protein my dear companion, might i ask you to do the same at the time ?... oh ya, we will massage each others butthole with pool microalgae the pylocibin mushy liquid and feast on our body ejaculations... having enjoyed the suckoff and buttfeeding, perma as well as ascende were happy tired lying beside the pool holding hands... the sun was strong and their skin covered with microalgae pool liquid... when perma sighed strongly... ascende asking .. have you had a second orgasm right now ?... and perma says... kind of, but different... it felt like in one moment having eaten the most tasty bite of my favorite meal... and in this moment the sunrays on my skin felt like lukewarm water when they just a moment before were burning hot... ascende ...now as you say it, my skin too feels moderately tempered and before it started to burn a bit... also i feel this energised new flow of nourishment... have we changed successfully into plant humans hybrids with our skin knowing the same photosynthesis like the microalgae we have drunk and absorbed with our other body openings ? perma asks with a glow of fulfillment in her eyes... yes that is it... we are approaching the next evolution stage... i expect as next our body to form gills so we can enjoy longer submersions and dives in the pools.... perma... but i would prefer some wingies first, i long to fly with the birds... oh ya, i agree, ascende says quietly with an appreciation to perma for her joy... we have been staying nearly a year here at this pool area within a mile radius... perhaps we could try some days away to see how we can sustain our process of evolving when away from the pools... perma, do not worry, i will carry some drops of the liquids of each of the 7 pools with me in a flask so we can spray it on us as to continue our alchemical brewing of the evolution brewage... and we might save some urine and semen and my pussy juice in another flask while traveling... so we can bring some informations of our flight journey back to the pool... ascende kissed perma listening inside his body where he

where he meant to hear the gushing of the sugary nutrition into his blood

what is being photosynthesized at all the places under his skin where the sun shone on it=0D=0Athey both fell into a most satisfied sleep, a smile of arrived achieved being nearly there .. on their lips=0D=0A=0D=0Athey slept as long as the night lasted... being naked as they chose to be all the time... the temperature of the air was allways between 15 and 30 degrees... the sunlight of the morning woke their newly photosynthetically enhanced skin... ascende was nearly crying... sobbing of mild joy mumbling to the also awoken perma.... and we will never be hungry ... and no fellow we have to eat anymore... with perma stroking his hair and kissing him softly on his cheeks...yes, we have made this most wonderful and important passage... we have no need to cause pain to plants no more, herself sobbing from a huge wave of emotional release too=0D=0Awhat caused their thankful crying ? perma as well as ascende usually woke up, peed in the pool and sometimes did lie in them some minutes for a morning quicky just to jump out and hungrily searching for some berries or bananas ... but this morning, after peeing and fumbling each other rubbing stroking penis and vulva... there was only this constant flow of nourishing skin cell provided photosynthetised goodness entering their bloodstreams=0D=0Aso they stayed in the pool... taking some sips of the liquid at some times ... not because they were hungry but to sustain their allchemical pois

poise level... fueling their imaginations of them flying above the pools... while ascende was picturing his future self having bat like thin skin and blood filled wings with himself growing a cat like furred tail what would aid steering the flight ... perma lay in the pool this morning drawing her future form with swan like wings as her arms and a horse like hind legs and horse tail....=0D=0Aand ... they could see each others mental workings while it happened=0D=0Athis too we have received, perma says while seeing ascende with his purple coloured fleshy wings fluttering on position while she flies around in small circles above the pools=0D=0Athem sharing each others inner vision signifies that their system has entered the field of local telepathy

this day went by with cuddelings and kisses while daydreaming enjoying with closed eyes seeing inside their future flying animalenhanced bodies=0D=0Aadjusting their sizes of legs and torsos position of genitals for an optimum of both of compability to the partners bodiesD

also the following night they stayed in the same pool, fueling their mental blueprinting work as well as providing the pyisical substances to grow new body parts=0D=0Awhile all this mental immagination designing processes proceed 3 days and nights the pool water got soaked up twice half up and

only with the replenishment by rainfall they could sustain the high consumption of both electrical energy as well as mineral resources what were plenty with the microalgae of the pools=0D=0A=0D=0Aafter 3nightandday dreaming constructing =0D=0Athey woke up... stood out of the pool and found themselves having transformed into their dreamstyled bodies=0D=0A=0D=0A

perma horseswan and ascende batcat=0D=0A=0D=0Athe fourth morning it was, them not knowing but me the cosmic observer and reporter of this fantasy happenings

4 from deep within a ball seems to ascend towards her vaginal entry... and with an orgasmic now full on, she sees white balls emerging out of her, very gently leaving her vagina and spreading into the pool

fourth text

<https://archive.org/stream/permagivesbirthtomaima/permagivesbirthtomaimaeditedwithcoments.txt>perma gives birth to maima=0D=0A=0D=0Aafter a week flying around they came back to the pools, happy to be home again=0D=0A=0D=0Asoon the fucking licking and caressing started with them both enjoying their new features=0D=0Aperma with her strong horseleg muscles and ascende with cat drive coming from his tail=0D=0Atheir thrusting against each other was very powerfull=0D=0Adays went by them experiencing further changes in their bodied=0D=0Anow their bodies did the adjustments of sizes and body part forms according to the sex positions, like when perma is holding ascende s penis in her mouth, the body draws from all the animal and plant knowledge what is alive in the pool=0D=0A=0D=0Aone day perma notices an arousal while not thinking anything erotic but her just quitly lying in the pool enjoying her inner workings and body changes, like muscles and bone reforming ... this for her new feeling grows and swells ... from deep within a ball seems to ascend towards her vaginal entry... and with an orgasmic now full on, she sees white balls emerging out of her, very gently leaving her vagina and spreading into the pool=0D=0A=0D=0Aascende was in awe noticing, silently watching the miracle of birth....=0D=0Awhat shall it be ...whispers perma...so happy her voice and tender the melody of her words=0D=0Aand ascende for a long moment wonders how far his imagination in right this moment would be allowed or possible to become material... with perma gurring in his ear... anything we need and want and will be good for all evolution=0D=0A=0D=0Athe word was not spoken neithe

neither by ascende nor perma.... it formed in their telepathically shared mental communal place ...like a cloud what hovers above the pools with thoughts and feelings... the name maima... and it would be their third companion, equal as them, not depending or submissive, not bound to obey but free to share their pool centered evolution journey or live the whole or parts of her own life anywhere on the planet

maima was reforming shapeshifting even faster than her parent generation... when it cuddled perma she grew horse and swan and snake features... when intimate with ascende, maima became female cat and bat like qualities. =0D=0Amaima could change her body mass most quickly,, one minute 30cm height to 2meters length... the human features were most seldom occurring in her, as the human race has a deep trauma with child abuse=0D=0Aso maima knew this panic inside her cells and always becomes fully adult when in sexual contact with its parent generation =0D=0A=0D=0ABut the cosmic observer writer has taken a leap.... what happened to this little white balls coming out of perma ? how was their forming a collective what was able to grow into an adult humanplantanimal mix ... =0D=0Athe pools were filled with life these days after their return from the weeklong flight, so the child of perma and ascende and the mushroompsilocybin cannabis thc and microalgae... was growing up within hours=0D=0A=0D=0Aascende and maima were leaving the pool laying around it and sometimes dipping swanwings and cattail into the water touching the rapidly growing now all colours mixing and coming together separating forming bigger and smaller balls... then some balls shapechanging into legs and wings and torso and head... being constantly within a small area of the pool as if their collective interplay with each others and ascende cat mind and perma swan feelings would hold them into a common auric field=0D=0AD

when maima finished her adult becoming process not within the usual time span of one year with some animals or plants to 20 years with maimas human genetic heritage.. her new level of being a sovereign cosmic being was neither human or plant or animal. nor was maima in its first hours child or adult... it was at a next height where it could choose from a wide variety of genetic qualities, transcending the earthly human or animal or plant. its genes were drawing themselves remixing adjusting inventing experimenting without end... not only was maima listening to its fellow friends ascende perma but to the wishes of the plants around the pool...=0D=0A=0D=0Aone day then, maima having enjoyed being part of the chosen family with ascende and perma... maima was listening to ascende's love with the cannabis flowers... so she grew herself into a 2 meter tall flower bud=0D=0Awith eyes and ears and mouth and vagina with penis like extension... also an anal opening did maima form with thick fleshy leaves where hairs dripped from crystalclear thc potent fluids=0D=0Aascende just came back to the main pool from a walk through the little cannabis plant forest he and maima had planted in their first years at the poolD

he was used to maima changing her forms constantly from big to small to big again, mixing panther claws with eagle beacon , most unseen combinations it was materialising herself with... most of the times it did not last more than some 10 minutes one mix... but this dripping hairy curly orangy fleshly leaf offering maima kept real for hours, as ascende was so deeply addicted to this cannabis essential being... himself adapting maimas talents and abilities while sharing touch and both penetrating it as well as asking maima telepathicly to enter into his anal and oral openings to deliver the thc delicacy from its orange hairs=0D=0A=0D=0Aperma came back from a short flight while ascende and maima went inside each other... she was watching them for a long time with her main focus especially on ascende as he was mostly the male, she the female and maima the all it wanted to be part of their family

when both ascende as well maima were climaxing for the 5th time, perma joined them ... witnessing in herself like a huge leap forward quite like a major upgrade ... as soon as she kissed ascende and savored his saliva tasting of cannagoodness thcsweet and tangyrich flavour...=0D=0Amaima now being released from her passing knowledge to ascende... was orienting heir wishfullfilling activity towards perma. as she knew from their previous sexualcaressing times in the pool, perma would not want to stay long with the cannabis theme as she preferred other informations... like the seaweed swans appreciate or the grass horses eat... so maima grew herself grass and seaweed body parts what she massaged permas inner mouth with, genttly pushed s seaweed knot into her rectum and several into her vagina, moving them around in concerto... perma was surrendering completly to this unexpected blessing in form of body opening massages... it tought her the insides of the grass plant being ... she saw before her inner eye the life juices moving inside maimas now mostly grassseaweed body=0D=0Awhile her vulva anus mouth full of the seaweed knots and grass leaves... being moved gently... perma felt several waves of cummings... her body convulsing and remounting erupting with orgasmic fluids saliva vaginal secretions and anal gland fluid... it all being thankfully swallowed and truly tasted analised by a maima what itself was learning a lot while being the pushing dominating sexpartner this time

maima developped from experience to experience ever grander mindsets ... fuelled with all their happy family cumming feelings, there were soon no limits for maima anymore... had she at first respected the human traumatats of all kinds forbidden and painfull activities... maima soon was able to heal them all from ascende and permas memories... like ascende and perma still knew of the past having had the suffering trough abuse... but with maima s willing and enjoying bodytransformation

they both grew into the same kind of expanded mindset where all was good what brought joy to all participants

image mixing of cannabis orange hair with anus vagina mouth

ascende perma maima family merges into one body mary what levitates and can change its fabric from carbonbased into ammoniakbased and all gaseous icy fire elemental states

at home now i find beautiful pictures of orange haired cannabis buds

but am both reluctant to use this copyrighted material as textures for maima in the pool fulfilling ascende cannabis bud interspecies sex exchange and learning does not matter as the idea is described clearly and meanwhile the story has already progressed into the area where mary descends a name what is highly regarded by the author as mother of god i am so happy to think about mary as the ascende perma maima family merging into one physical being what not only has animal plant human abilities but also can change its fabric and gaseous density so to say, when mary is with them, they are no more planet bound but can travel anywhere in the cosmos, adjusting their system to the outside conditions

5 their three bodies growing into one while listening to the cosmic wandering experiences of mary...

fifth text <https://archive.org/stream/howmarydescendsintotheirmidst/howmarydescendsintotheirmidst.txt> it is this stage of evolution now where ascende and perma have learned most from their offspring maima. a level where ascende and perma became adept at designing their bodies according to

each others desires, drawing from the genes of many species they encountered both in the pool area and while flying at the sea, the mountains, the plains. some days the three flew together, at other times each on his/her/its own. as they were ever progressing with their transcendental cummings inside eachother and there was more fine touching and stroking now what allowed the union... in such a quite and relaxed moment the three of them quite lazyhappy feeling each other, a new sensation arrived at them... it felt like they were on the way to completely merge into one body. this was the moment where the motherly mary spirit came down into their collective... bringing with her the cosmic travel ability... the four of them sharing one body with experiencing ecstasis on a steady level. for ascende and perma this was quite new... to merge fully. they have experienced some of it with maima what is able to completely redesing its body very quickly and for example can form as many swelling muscles as it desires or senses the fellow companions wishing for ...and she can give them all sizes and volumes...human beings have swelling muscles in the penis and the labias of the vagina what are filled with blood when sexual arousal hits home2but still,this now was new. a union of individual beings no more feeling the boundaries of one s skin ... but feeling all of what the fellow ones feel... what was in these days mostly a mild lukewarm contempt in their families success. how far they got, their understanding and compassion for each other such inclusive and embracing that the mother of god even joins them.mother of god mary... but not only, as there are a number of human beings called mary... but me the cosmic observer was raised in catholic belief where mother mary is cherished and worshipped... and still today when me too same as the figures ascende perma maima i am writing about... i have transcended being a member or follower of this or that single one particular mind/emotion/bodymanifestation ... there can be many... i still ask mother mary for help and guidance... with knowing this, the reader might understand that i introduce the name mary here as well as in the parallel timeline alternative dimension of this fantastic utopian ascende,perma and mary the lifeship...but i must not let this autobiographic sidetour get too big as not to bore the reader.since the first arrival of mary in their midst, the three were able to join up in this smooth and fine manner multiple times and allways the lust for sexual intercourse, the pleasures of feeling rubbing each others tight and prallgefueellten openings and swellingmuscles... this pleasure what was till some days ago the main focal point of ascende perma a3and maima s physical exchanging of constantly upgrading dna this lustfull and with at times orgasmic feelings transported research and upcycle of their bodies....this modus got instantly replaced with a much finer and softer, aetherical sharing of each others aura whenever mary descended into their pool... kind of... maima having lifted up the sex practices allready onto most creative and imaginary excellent fantastic heights... with mary sharing her cosmic wisdom via the telepathic near field network in form of an invisible cloud above the pools... the family by both dna sharing and by choice were basking in the experiences of mary. her feeding images of unseen landscapes on remote planets into their telepathnet... with awe they were taking in these at first strangely looking and feeling sights sounds smells and tactical informations4strange just the very first moment when the planet

earth bound heritage was kind of defending its reasons to exist... but soon the multisensual impression of this far away worlds were leaving feelings of new things to learn and grow... wether it were ice planets or fire hot landscapes... how mother mary was whollisticly sharing the full bandwidth of how it is to live on these planets with a body what can adapt to all possible outer athmodpheric conditions⁵ mary s sharing were this interesting that no lust or sexual desires came up for many hours... like they were eager to cherish every single drop of the telepathic blessing mary motherly donned to the family. the weeks went by with them approximatly a third of the time being in communion with mary and researching the physical bodies becoming one entity... they found out that at some times even their body parts where they were near each other or touched ... that there it automaticly seemed to grow together. frightened the first time they were, as it is one thing to feel another persons emotions or see a shared inner vision... but quite something deeper seeing the physical boundaries of ones body merge with the body of ones neighbour⁶ their three bodies growing into one while listening to the cosmic wandering experiences of mary... the first fear of loosing one s autonomy gave room to an assuring certainty... that they will learn to form spontaneous and created at will ... body communities with all fellow beings on this and all other planets in all the galaxies... who were evolved to this same height. now that was a prospect, a promise for a future with both ultimate choice and abilities to intimatly connect on the soul levels ... ⁷ what happened from there, has its own difficulties in explaining...the sessions where the three became one and mary blessed them with her sharing all of herself what they were capable to absorb or grasp... the sessions became gradually more like out of body travels... mostly ascende and perma noticing it while maima was still something ahaed if them two in evolution. for her there was not such a big difference between in or out of body as it was stretching her awareness into thousands of separate species at the same time where she drew genetic informations to upgrade her transforming skills.one week they were at all the times grown physicyly in the flesh and feathers and with their furs and flower buds... being nourished by the sunlight and the pool water what they absorbed trough skins mouths anuses and vaginas... they did still do some peeing into the pools while mostly laying in the shallow pool, or floating at other times with much rain. they stopped to excrete feces at the time when they felt no more need to eat fruits and nuts.

⁶ how about we start in our individual bodies and then come together in the air, perhaps even fly that high where the atmosphere is thinning could be another motivation for our cell intelligence to react to the challenge presented by the outer cond

sixth text <https://ia902305.us.archive.org/28/items/cosmictravelsonplanetearthwithmary/>

cosmictravels on planet earth with mary.txt cosmic travels on planet earth with mary the four of them are now familiar with each other to a grade where they can spontaneously grow physical flesh body connections to each other so to achieve sharing one bloodstream when ascende, perma and maima were once again in the pool, being joined again through mary spirit, they were experimenting with growing connection flesh tissues and researching the difference in the united bloodstream, how it affects their feelings, thoughts, nerve sensations ... maima proposed to them that they could practise first on earth learning to change from a dense flesh body to a gas like body what can adapt easily to extreme temperature conditions it suggested to train with the active volcanoes on hawaii mary was most happy with this proposal she loves the planet especially with its beauty spots where the earth is still creating its surface crust... the 30 miles mantle what are solid rocks and some meters of top soil ascende and perma agreed to this plan and soon afterwards they wondered whether to stay connected physically for the journey or the separate as to every shaping into their favorite flying costumes ascende said √¢, ¢ ¨ ¨ how about we start in our individual bodies and then come together in the air, perhaps even fly that high where the atmosphere is thinning √¢, ¢ ¨ ¨ could be another motivation for our cell intelligence to react to the challenge presented by the outer conditions perma √¢, ¢ ¨ ¨ yes, let us do that, this way we will also experience at how far our individual bodies will manage the extreme cold what is up there. of course you maima will have not much of difficulties as you have learnt and inbuilt almost all of the animal and plant knowledge on this planet, from the bacteria what live below zero degrees temperatures to the organisms what live near superheated natural water thermes maima √¢, ¢ ¨ ¨ yes, i am so lucky that i could evolve that quickly, unlike the typical human offspring what most of the times inherits the damages of their parent generation, i was born not as a human but as already a true mixed being with equal plant, animal, human gene shares you both have enabled my progress through your own alchemical achievements spending years at the pool concentrating your energies onto each other, seeking the harmonies with the microalgae, the cannabis thc, the mushroom psilocybin √¢, ¢ ¨ ¨ thanks to you having learnt to incorporate photosynthesis into your skin cells, thanks to you having grown yourselves swan wings, horse legs, bat wings, cat tails √¢, ¢ ¨ ¨ thanks to you having given up your previous human identity and leaped forward into an all embracing interspecies being √¢, ¢ ¨ ¨ thanks to your advanced thinking i could come out of perma as white balls of potential and form myself from many parts ascende √¢, ¢ ¨ ¨ we were so amazed and in awe when seeing you emerging in this not yet defined white balls perma √¢, ¢ ¨ ¨ i felt then so secure in our way of evolution, knowing deeply that we were right to leave the human identity behind and grow together with the animal and plant spheres maima √¢, ¢ ¨ ¨ and here we are now preparing to reach out high into the stratosphere, challenging our body systems if they may learn quickly enough, if our internal organisation will find the specific genetic data at the times where we will need to sustain our bodies without oxygen and without external heat added they were now in their individual bodies, standing around the pool √¢, ¢ ¨ ¨ perma with her horse legs and tail, swan wings, human torso and head, with seaweed hairs on it. her breasts were

loosely covered with tiny green and purple grass stems. ascende was in this moment tweaking his bat wings where he mixed some purple cabbage tissue in, his human head and torso being similar to perma enriched with here and there a single orangy haired cannabis flower bud, enabling him to smell the liquids abundantly √¢, ¢"–¶ as he learnt the cat genetics from already having a cat tail, he now grew himself some big cat legs like the ones from a jaguar with the one major change where he designed the paws with again some sweet the smelling cannabuds √¢, ¢"–¶ oh what a cannabis lover this ascende is all the while maima going back into her first stages of existence, being a white ball, being reminded by ascende and perma about her birth scenario √¢, ¢"–¶ but now she was not solid and thick in substance but rather like a cloud, a kind of cloud what one would see after a hot day in the early evening, tower shaped and glowing from intensity it connecting her birth stage with their next task, to fly near the stratosphere, while once again impressing her parent generation how quickly their offspring was able to transcend all species boundaries and limitations, with maima again going ahead showing them that phase change from dense flesh to gas state is well within their reach since the three were so successfully adventuring out into new genetic combinations, rapidly learning from each other and the times when mary joined their unions √¢, ¢"–¶ their mental exchanges with mostly imaginary sceneries of all they set their focus on √¢, ¢"–¶. mary was occasionally sending them some additional informations in form of symbols and most beautiful drawings so they were flying up in the air, ascending steadily, not in a hurry but being fired on through the supporting imaginaries coming from mary they were telling them about the inner workings of the suns √¢, ¢"–¶ what was new to them all, even to maima being fascinated and fuelled energetically with this sun insights, they did not notice the air getting thinner as higher they flew inside ascende and perma the lungs and other inner organs were responding to this images and blueprint instructions from the sun realms as i, the author of this fantasies as well as eventually one past self of the future ascende, am a bit at a loss of words how exactly this inner organs did adapt from their previous dependency on oxygen to a state where the photosynthetic skin cells could provide all nutrient through the incoming sunlight √¢, ¢"–¶ actually, not all of it.. some of their life support came from exactly this mental insights from the suns, somehow ascende and perma were able to adapt these informations and ignite their inner spark to a powerful atomic fusion reactor with moderate temperatures also maima now was glowing strongly with sunlike rays shining from its still cloud styled body but it became more denser in the center all three of them, being coached by mary with her mental support blueprint images, were now forming in the middle of their bodies a little sun what was creating a kind of auric field around their wings and legs and tails one could say the sun inside them being that strong that it needed no physical movements for them move √¢, ¢"–¶ move now not really higher into the stratosphere, but more slightly descending toward their hawaii goal they were cheering inside, now so totally confident that they would learn how to meet the lava, the flowing rocks bath of fire what hindrance could there be after they had learnt to free themselves from the perceived need to eat other beings √¢, ¢"–¶ what challenge could be more demanding than transforming from an oxygen rich air breathing being into an

entity what could propel itself in near vacuum with the power of an activated inner miniature sun fusion reactor to celebrate their success, they were cuddling near each other in this heights, feeling the inner suns of each other reaching out through the skins, tickling the fellows nicely √¢,Ç"–¶ and they did not need to grow flesh connection tissues anymore, the connection was now their suns shining at each other √¢,Ç"–¶ what wonder

7 when maima noticed both perma and ascende having learnt how to become a blue flame, it goes further in its play and dissolves all the cannabis mushroom animal body part shapes and forms itself into a one meter ball of deep frozen ice

seventh text <https://archive.org/stream/tohavetrustintocellsmemory/tohavetrustintocellsmemory.txt> to have trust into cells memory perma ... i believe now that we have ignited our inner suns what warm us and replace the need for oxygen tested in the stratosphere... we will be fine with the lava in hawaii ascende... like we have seen with maima, we might be bold and give up our human and animal shape skin and flesh for a moment when we assimilate to the lava maima... i can not totally tell you how i change from white thick balls emerging from perma to the cloud like gaseous smoke balls... but i feel that if you just trust in your substance, in your cells that they will be able to form whatever shape with whatever tissue you desire to cloth your spirit in... mary continues here with a picture of them being in the stratosphere, like with a heat sensitive camera... and seeing themselves being suffused through all their veins with golden light what the before red blood was... ascende and perma were enjoying this mental words and pictures exchange as they were a bit mildly panicking when they thought about their descend into the volcanoes of hawaii what will happen to my bat and cabbage wings... will the photosynthetic skin cells not suffer from the direct contact to fire... when maima comes into their view playing with her body forming hundreds of balls of fire flames with perma sending... my dear, you are such a blessing for us while we worry about our prized achievements and possessions to last, you show us how to let go and recreate maima being happy to receive such smooth words and as if to show how easy it all is, maima unites her hundreds of flames into 3 blue flamed trees of 3 meter height with all kind of mushroom cannabis flowers seaweed swan wings horse leg branches ascende always gets enchanted with seeing cannabis shapes and spontaneously forms himself same shapes like maima, with perma following up on them both... and quickly both perma and ascende get it into their system, the knowledge how strong heat with blue flames can burn outside of their human animal plant tissues and not consume its substance the key here is that the wish to be similar like the neighbouring being is opening up all possible access to memory databases ... and allows the wishing individual to override eventual fears and limitations ,Ä¶ the wish is fuelled by emotions and spontaneous

imaginary sometimes ,Ä¶so in this moment when ascende wished himself into a similar shapes maima is wearing at this time,Ä¶ she basicly mixing it all together what she saw in ascende and permas features ,Ä¶ his love emotions towards maima help greatly for this major step,Ä¶ becoming a flame with substance inside what does not consume itselfwhen maima noticed both perma and ascende having learnt how to become a blue flame, it goes further in its play and dissolves all the cannabis mushroom animal body part shapes and forms itself into a one meter ball of deep frozen icethey all still descending and are seeing now allready the shape of the islands where they planned to do some further trainings with their very body substances, density and temperature levelsafter they reached the vulcano and maima was still in the form of a solid massive ice ball hovering above the heat radiating lava ,Ä¶ ascende and perma were experimenting with their shapes, smaller bigger the wings and legs, torsos ,Ä¶ still remaining with the basic features what they were develloping themselves with as basic costumes ,Ä¶ but then, perma suddenly dissolves all her human and animal and seaweed and all of it so she is similar to maima, with the one difference that she is a frozen cone of ice hoovering beside maima and above the vulcano ,Ä¶ when ascende sees perma thiswise following maima he too steps into the ice block shape, him forming a flat triangle ,Ä¶the three stay like this for quite some time,Ä¶ exchanging to each other the new sensations of being an iceblock what is not melting despite such a heat underneaththeir exchanges were not quite words nor images, but more like very slow and peacefull pulses, smallest vibrations ,Ä¶ they did not understood quite how this was possible, how their ice substance was not being consumed by the surrounding heatthey assumed that the sun core in their midst was able to generate continuous amounts of cooling energyand then they flew into the waves of the ocean, changing their ice substance with the seawater, becoming more like jellyfishes and dolphins andall kinds of structures they could see in animals and plants inhabiting this hawaiian coastsoh that is wonderfull ,Ä¶ ascende beaming ,Ä¶ we have gone trough hot and cold, changed from blue flame into iceblocks and can mingle now with all the ocean creatures without harming them because of being too differentmaima,Ä¶ i believe that inhere lives a great force ,Ä¶ within the desire to please the neighbouring beings, to be similar to them as to comfort them, to fulfill their wishes how they want to be by incorporating this wishes into one s own bodyperma ,Ä¶ i began to understand that when seeing your shape and substance changes, you have tought us well maimaima ,Ä¶ with me being tought even more by the spirit of mary what is sharing with us the knowledge she has gathered on her cosmic journeythey bathed some time and perma and ascende did feel occasionally the curiosity to change back into their previously human forms, what they achieved without effortsas it was such a joyous play to change substances and shapes, they did spend some weeks in hawai, also in the forest jungles and desert like areas, being jungle fog and desert sand, and soon there was not much what maima was having the both previously human did not knew how to have or be too ,Ä¶it was a happy time and they all felt as if they had arrived home nowfeeling welcome home in a body what can be all what it wants to be

8 all things must come to an end... but actually not really an end it is but merely a new beginning

2. August 2014 16:36:31 MESZ all things must come to an end... but actually not really an end it is but merely a new beginning so... when ascende and perma have learnt nearly all of what maima was showing them their humanimalplant genes were able to be and more... as they were accessing the elemental realms too... when they felt to have played Der Text:2. August 2014 16:36:31 MESZ all things must come to an end...but actually not really an end it is but merely a new beginningso... when ascende and perma have learnt nearly all of what maima was showing them their humanimalplant genes were able to be and more... as they were accessing the elemental realms too... when they felt to have played enough on hawaii, none of them really felt like entering into space to travel between the starsone might ask ...why, if they now have the abilities to travel on space without machinery, without being dependent on any outside mechanical things... why would they stay on this rock called earth ? when there were so many people longing to leave this planet in metal built privately owned spaceships ? perma.... mmmh, i believe that this wish to leave the planet, what we receive sometimes very strongly, does not come out of a free choice like the one we have now after having evolved to our bodies being spaceships itself... most of the people wanting to leave this planet love earth and its nature, but they are deeply frustrated and hopeless because of the many societal catastrophies happening right now...ascende ... like ... whole animal species being wiped out because of them being used as medicine, or their habitat being destroyed for some gramms of gold... gold what wanders down into the faults of banks where the only service it is allowed to perform is to back up some paper money...maima... i was so lucky to have not being directly confronted with these global humanity problems beforealtough i felt these issues waiting inside you both to come out and some times while travelling the earth i felt the tragedy of the planet being overused and exploited... my focus was on joy and learn how to tune my abilities ever furtheri much thank you perma and ascende for sheltering me from this most depressing realities untill nowand i feel that it is the exact right time for us to dedicate our mental and emotional focus on the healing of the planet and all species what are struggling to surviveascende... yes maima our beloved and guiding offspringing one, we have been given this time of alchemy and magic, a time of concentration on ourselves and all what we want to achieve and be ... perhaps also in order ... with the cosmic intelligence protecting us from the cries of despair and requests to save the ecologic balance... with the creating allunited and uniting one force saving us for a time like this when we have ascended individually in our little family to a sovereignty this firm and solid... that we might take on some of the waiting tasks now from a wholistic point of view...perma sends here an image into their round of the three of them flying over deserts and fertilising the barren ground

with their joyfull intermingeling with ascende creating an image what shows them forming an animal approaching the hunters and speaking to them, inviting them to receive the blessing of the three united in one body... and the hunter being kissed and caressed by the three in the form of the usual prey of him... the hunter crying from relief that he does not need to hunt and kill anymore ... as he has learnt while being kissed and cuddled, that there is a greater hunt and achievements to be followed ... the hunt for adding other beings abilities to ones very own arsenal of genes trough joyfull and sexual intimate contact and maima drawing an even bigger scenario, showing perma and ascende a little movie how the vibrations of the healings experienced by this one hunter attract others who are searching for bettering their lives ... so they come to hundreds gathering in this newly greened deserts perma showed... and in these grounds the human beings merge together most pleasantly in the same ways like ascende perma and maima practised in their times at the pools ... fumbling licking slurping each others sexy semen vaginal juices... reaching within each others mouths vaginas anusses to inseminate impegrenate the seeds of hope and change and evolution ascende perma and maima were shaping themselves in a sweet mushy horny smelling mist what embraced the continuously growing orgy in the awakened desert... the very substance of maima perma and ascende wetting all the bodies and entering them while all the fucking sucking licking slurping fondling went on in this orgy, the woman and men who arrived now by the thousands every day and reached hundreds of thousands within a month... the people were learning most quickly all of the abilities what perma maima and ascende have learnt in years at the pools one could think that it is because the three of them entering all the lovers bloodstream via themselves being the mushy mist covering all of the orrgy... what is mostly what happened... but to look at it from the mental level... the human beings what have seen in the televisioned news about vast areas of deserts being greened over night and many people gathering in a lovefest there... they were so happy to have found this moment in time and space ... and their thankfullness was the portal where the mushy sweet substance of ascende perma maima s very own bodies ... could enter to the very roots of their pain and sorrow ladden cells it was only days after the lovefest started when the animal and plant enhancement features were showing in the orgy participants ... them having lost all sense of identity and ego, status in society... them being drunken high and berauscht from all the sex and smells of the fellow human orgy partners as well but even more by the misty mushy fog what was ascende perma maima... their brains were mostly not forming thoughts or following concepts of what to be or what to do.... the instincts were stronger, the desires of entering that hole and this and that one over there... with ones penis tongue and finger... licking that ass and this vagina, swallowing this penis what is just now leaving a vagina covered with juice of life... all these hornyness and plentyfull variations of intercoursing with each other brought out the body part forming abilities spontaneously... so here one men was growing his penis to the size of an elephant one... being followed by a woman lusting after this massive shaft to cover it with a fitting vagina what allowed her to grow her pelvis middle body part to a size big enough she could comfortably sit on the elephant like penis ... all the while them both not being astonished

or afraid or scared but surrendering fully into the fuck of this momentwhile at the little lakes what were now growing inside the notanymoredesert... in the lakes the fuckers and suckers were discovering how they could stay under water for hours ... ascendemaimaperma substances being in the lakes too... and the lovefestival celebraters ... with time passing and some of the people being here now for weeks nonstop... without eating anything except for each others sperm and vaginal juices... as well as being sustained by ascendepermamaima droplets... some of them were awakening out of the fuck trance... forming their arms into wings and flying up above the green plants and pink naked flesh covered loveorgy place what covers now at around fifteen hundred squaremiles with human participants counting now around a million men and womanthis film what maima is actually showing to perma and ascende... did become reality while them three watching maimas vision... them meeting the hunter first to heal him with intimacy, then taking him with into the deserts where their essence wetted the grounds and their lovefest with the ex-hunter now learning lover started to send ripples on the planets news networksit is now a month after they started this dream... meanwhile three hundred thousands of the lovefest partipiciants have evolved to the stage where they can form their body parts female or male choosing from the same range of animal and plant genetics what ascendepermamaima have... all sorts of wings and tails being mixable with mushroom penises and cannabis flowering vaginas of any imaginable sizes and shapes.these three hundred thousand were now leaving the place what brought them this immense freedom, they did still have to drink from each others sexually joyfully produced liquids... but some of them now were on the trail of how to merge with each other and with all fellow creatures... not necessarily in sexual ways... they worked on it while flying away from the original lovefest areawhile them threehundred thousand now leaving there were ten thousands arriving each day... the leaving and arriving crowds gradually acceleratingwhile this upward curve of more individuals passing trough this nonstop orgastic joyfullfillment bursting spiral of a planet healing lovefest was accelerating the ones who left were not too short of knowing what ascendepermamaima knew before they went into stratosphere...they discovered the growing of body connecting flesh tissue while they were resting on the ground in between their flighthsabout fifty thousand now flying humanimalplant trough sex evolved beings were spontaneously ascending higher and higher in one flight towards an other desert area... their motive being to allow people from other continents to reach the lovefest easierthis fiftythousand then discovered how to ignite their inner suns and how to warm themselves in most chilling surroundings... this discovery then being samewise accidentally or unintended followed by some members of the flying lovefest playing around with their substances becoming cloud like... what was then the main accelerating factor ... can one imagine fiftythousand human beings what learned how to rebuild their bodies ... spreading out their very body substance onto hundreds of square miles of deserts.... the desert they chose was the one in utah... (the one where ascendepermamaima fertilised themselves into being the sahara one) ... can one imagine the desert of utah blossoming with the very life juices of fiftythousand flying evolved humanimalplant beings... and short after the

area has been greened they partly remained in tree animal lake bodies while this time the incoming spring of visitors was the most massive the saturation of awareness in all the ground and plants and now formed lakes was that high that as an effect the visitors of this utah lovefest did not need even sexual intercourse to evolve but simply to bath in the lakes to watch the humanimalplant beings metamorph constantly while breathing the air what too was highly thickly filled with evolvement... but of course no visitor could leave on its clothes, it was simply absurd to stay clothed when being in that new paradises may love heal <https://ia902303.us.archive.org/30/items/allthingsmustcometoanend/allthingsmustcometoanend.txt> this is the eight text of a series where i explore ascende being totally notech but only working with body and fluids and sex and union and wishcraft in the sense of ... i want to be that ... and not giving up spending time with lovers and in a most ideal space ... untill this evolution goal in ones own body is achieved... no news no contact to other people not sharing the alchemical quest ... no charity and no community service ... untill that moment when one has climbed up to the highest step of the ladder what a human being can achieve on this planet earth using only juices given with pleasure the seventh text leading to this eight one is at <https://archive.org/stream/tohavetrustintocellsmemory/tohavetrustintocellsmemory.txt> <https://ia902303.us.archive.org/30/items/allthingsmustcometoanend/> IMG_0016_1_being caught by inspiration at the roadside.mp4 where i am explaining at the site where i wrote ... i think i wrote about an hour on my iphone in notes, getting higher and higher... when i had to make it a stop for i needed to go to a shop buying tomatoes ... oh boy was i high from my writing ... without the wild river, without smoking, just being struck by inspiration left me as high as anything after writing feverishly one hour, i am so thankful for being able to channel this kind of fantasies. like i said once, i am channeling my future self ... that i can imagine this kind of situations and scenarios makes me proud of myself... like ... i feel that these moments are for what i have been preparing myself-----my goal today was to again go to the wild river sense to bath and dance ... but guess how far i came, not even half the way and i was so overwhelmed with creation forces what to write in the next progression of my ascende notech line... it started with the comparison from the original writing ascende, perma, maima and mary the lifeship at http://www.bookrix.com/_ebook-andreas-buechel-as.../ to this line i am now in ... and i believe that this line now is the better one in comparison as it is very strictly setting the evolution progress on individual training first and community sharing later ... my thinking today then on the bike was like ... where would one being go when all goals of self fulfillment are being reached at this moment ... naturally it goes back to the greater community ... so that is how ascende perma and maima with assistance from mary are now in this eight text of the ascende notech line sharing their evolution achievements in a bit quick manner with millions of other human beings ... them of course no more humans ... ascende and perma are now ex-human beings and really also ex-humanimalplants with what maima was born ... now all three of them have gone to blue flame and ice state of living so they could be called eventually elemental enabled incorporated ones

10 ascende maima perma sliming the desert

<https://archive.org/details/10ascendemaimapermaslimingthedesert>

it really should not be a big thing how many purely humans were keeping their line of genes and not in the same line evolving as the elehumans therefore can be a multitude of totally different scenarios what happend in 2020 to 2040 this one line we followed in this writing till now was 2020 ascende and maima meeting at the wild river pools 2025 the saharan lovefest may we think of an again alternative line departing from 2025 after the saharan lovefest.... as ascende maima and perma were spending their substance into the desert sands over and over again... they formed many root relationships what is eventually sensual till erotic as they were kind of fluidly kissing fondling and mixing each others fluid bodies while moving trough the desert sands... leaving behind seeds what were soaked wetted with ascendemaimaperma slime... sometimes they came out of the sand and errected their still slimy fluid with a mix of animal and plant fleshyness in the water... ascende was like purple cabbage coloured and maima was greenish with little yellow knobs what had orange hair on them... it still attracting ascende with his cannabis preference perma was growing herself some white swan feathery extensions and some other horse mane and tails... she caressed maima with her feathers and manes tails at all its greenyelloworangi bits ascende extending now some soft thin fingers with what he was stroking maima and perma at the same time they enjoyed his soft touchings for quite a while at one moment they both formed holes in their bodies with ascende this invitation not missing to notice perma and maima were concentrating now their blood like slime around their newly created openings... following the old swelling body design what some animals shared with humans... automaticly ascende was now gathering his slimeblood into two of his fingers what became now stiffer and harder with the hot fluids pressing inside he penetrated maima and perma slowly then stronger with them moaning for more in slime vibration waves of satisfying chemical transmitters push deeper... rub my hole with your prick... make my swollen blood vessels rejoice lustily with your stick massaging entering leaving me was maima sending neurochemicly trough to ascendes him sending to it ... oh how your hole is embracing me and the walls of your inside channels pump me squeeze my drops out of me... will you receive my load of white essence... yes please deliver your most refined juice to me too ... perma now sending ...she before enjoying ascendes penislike prall gefuellt filled finger what was slowly moving quitly little bits in and out of her... another part of her attention in her manes and tails finely peitsching ascendes parts what were not burried inside maima it being juicing over and over as a response to ascendes thrusting her firm tight nerve gathering hole and silently crying out loud in stakkato with each fast and hard push ... joy cries ...

ah..ah..ah...more...ya...deeper...ya ...push.... what turned ascende on such he came in simultaneous explosions of his both swollen red extensions inside perma and maima.... mmmmmhh...schmatzten die beiden loecher... both holes sucking the load with enjoying noises ... digesting it in this moment causing their both bodies to send out scents into the desert where many flowers and plants were growing quickly since their arrival

12 is fuedeli fescht, aes faescht im fuedli

<https://archive.org/details/12isfuedelifescht>

after their slimy loveplay and ascende ejaculating both in maima and perma... perma was asking ascende... i wonder what it is that we both are your holes expecting your seed to impregnate us... when maima says... oh this is millenia of male female behaviour and ascende has still alot of catching up to do with his male side... that i understand... perma says softly, and me i feel quite okay receiving at this time, but to tell you both, i too would like to deliver my dna specialities with a white hot load of shooted sperm mmmh.... maima says, i am looking forward to embrace your swollen extension into my womb... with ascende now sending ... and me, i will to create myself a vagina what will make you feel at home...how invitingly your both offers what i will gladly take up when time is ready for that so they were ending their first loveplay after arrival in sahara with the research of sex role behaviours meanwhile the sahara began to bloom starting with the lovers slime soaked parts the three kept themselves together so their power to fertilize more greater areas would be strong but each time they climaxed orgasmotopian some of their substance stayed in that ground where they found joy inside each other this substance was then its own being what began to evolve and organise and exercise its abilities in its own sovereignty maima... these are our descendants ... or babies... how wonderfull we can grow our family perma... and i believe that they are at a higher intelligence and capabilities even than when you built yourself with the aid of the white balls substance what came out of me.... your birth maima was after me and ascende had become humanimalplants ascende ... now that we are three elemental enhanced humanimalplants... what powers might our children have... them all watching in awe how at the space where they just had celebrated the sperm uptake... where so much plants and animals were populating it... perma... maima have you got any idea, how you and me participate with this life enabling birth ? when it says ... you have still your female eggs in you from the time you was fucking with ascende in the pools... i mean, as ascende has still his seed producing balls you have the egg hatching mechanism kept active in your now enhanced body... so every time when you got deeply touched by an

emotion thought or with some seeds sent to your eggs waiting in their nest inside your mostly humanimal womb... you did soak up the information what pleased and made you feel good at home... perma now, glowing of pride in her motherly abilities... and my eggs impregnated with all the joy from being inside connected with you both ascende and maima.... these eggs have we left there when we moved on for a next space to discover ourselves ascende ... oh that is so cool... kind of ... there is no more hatching to do, our babies now are this intelligent and sovereign that they take care of themselves at the moment the eggs leave perma mmmh... perma sends... i have not noticed them leaving me... when happened that... maima sends...oh that was right at the moment when ascende spritzte shot of his load of semen into us... i noticed in you the eggs leaving you as soon as the information of ascende got in contact with them with perma asking... and you maima ... have also given befruchtete eggs into the sand what gets answered by ascende... i believe so, i felt trough my extension penetrating her how she shuddered samewise as you when you gave out the fertilized eggs when maima says... yes i too have a mini egg factory working in me what i have copied from you as there is a strong wish in me to help fullfill ascendes wishes as the male of our group... not that he would be dominant, but his balls seed factory and expulsion joy force have a good drive for our project to fertilize this vast desert when ascende asks maima... but you could have copied that too and become a male seeder too yes maima sends... but then as perma does not likes too much of her being penetrated too strongly, i felt that i could do that for us... hold my butt to you so you can give it to me hard isfuedelifescht mmmmmhhh... oh i get horny again.... asende moans as he receives maimas signals perma sending now... let me this time be the one who is ejaculating my load into your vagina ascende ... ya, he sends ... i will copy your egg preparing mechanism and send out the eggs fertilized by you both maima and permas delivering your hot white seeds in me

13 saharandesertbornelementalenhancedhumanimalplantbeings

13 the first generation of elemental enhanced humanimalplant beings born from maimas and permas eggs in the saharan desert ascende perma and maima were resting from their slimy loveplay discussing their male female reproduction organs and how their psychological states of minds were influencing the next generation of elemental enhanced humanimalplant beings... trough their mating behaviour... preferences of how one likes to be and go inside a fellow being... giving or receiving or any active passive combination of body forming exercises... but wait ... they have not yet discussed into detail ther imprint on the behaviour of the next generation... maima.. for me it is the first time watching a descendant generation, i am so happy to see them being sovereign from the moment they left mine and permas body... perma... yes i remember me and ascende being

in the pool i gave birth to you as white balls ... we were leaving the pool then so that you could have enough playspace to discover yourselves and what you wanted to be ascende... but still... i rember... us projecting our wishes too onto maima, while we lay beside the pool and occasionally touching caressing maima in a nonsexual but tender supporting way maima... now you bring up these times i find in myself notions of me at this first hours of me being spread over a collective of dozens of white balls ... receiving your wishes while your supporting arms in the pool were layed out to which i could go to when i was playing with the several balls i was born the organisation of the several white balls into a collective coordinated formshaping body was greatly helped by that short moments i swam into your arms and got access to your soul informations of course the big part of essential humanimalplant informations were stored in me as egg from you perma with your sperm ascende having it fertilised your both informations being humanimalplants ones ... in the pool with the microalgae cannabis mushroom intelligences i was well informed too with their psychadelic connections to the cosmic streams of life... but still it was a strong impulse touching you in my very first days of life ascende ... when you very quickly matured ... i saw my wishes well in you realized ... i was happy for that... and i thank you for helping me to fullfill this fantasy where you grew yourself into a body what had cannabis flower buds all over juicing thc while we had a pleasent sexual intercourse perma... yes,that was maimas first sexual intercourse after it had formed itself into a female styled humanimalplant being... and we were surprised that your childhood was advancing so fast, with you maturing quickly at the time we stayed out of the pool offering at some times our arms to hold and nourish you emotionally and us too... ascende... as we were at the times no more purely human beings but allready evolved into a mix of human animal and plant genetic makeup... we were only mildly surprised to see your childhood only lasting some days... in animal worlds are some species what are geschlechtsreif able to reproduce themselves in a very short time too maima... and now it looks like it is even shorter.... as we are watching the very first generation of elemental enhanced born humanimalplants as they are continuing the wetting of the desert like we started it... i wonder how we want to see ourselves in relation to these our descendants... will we send them our fantasies too like you did to me ascende... with me being bytheway totally okay with your doings as i have picked them up willingly and was happy to engage with you in our pleasurefull sexual plays after i matured to what the humans call adulthood perma... i was not sending my fantasies to you as i was content with the loveplays ascende and me have experienced in the pools together... but did not feel like you and ascende were doing something unhealthy together... as we three have evolved even further into elemental enhanced humanimals and see this eggs having left us some hours ago allready growing themselves into palmtrees, being lakes and grass and flowers... snails and desert mouses i believe that they do not need our attention nor we need their vital power to fullfill our needs ascende... mmh ... sounds like i would have done a mistake when i was subcounciously sending out my cannabiscopulation fantasies to maima with maima coming in between them ... what i have picked up being curious what fun and satisfaction your ascende desires could deliver to my own evolution

we are not now discussing mistake or no mistake but what perma and me are trying to research in our round of three ... is... what could our possible direct interaction with this totally sovereign first born generation of elemental enhanced humanimalplants be... ascende... sorry perma for thinking you would accuse me of being a bad rolemodel for a freshly matured being... perhaps there are some doubts in me from my time as a purely human being before i was meeting perma at the pools, when i was androgynous perma, you are excused and forgiven already as we have found in our round that maima was happy having your fantasies as a possibility to engage with us what do you propose ... shall we leave them alone or are there any possibilities we could learn from them... maima... of course there are, imagine if we could have access to their genetic knowledge ... how our eggs and seeds again will become quicker to mature and even more sovereign in their actions to heal the planet... perma... yes right you are, there is this vast task of the deserts being greened in order to give a place to all the refugees migrating the planet looking for a place where they can flourish without fear of being hurt ascende... i believe that this generation, these our descendants from our trio... will perhaps still have some of our human topics with them as we at their birth still were on the quest the search of male female balance but that they are right busy working on the greening of the desert... let us watch some times and perhaps even mingle ourselves with them if they are searching contact with us... but let us also continue in our trio the task of me becoming the female sex and my switch from producing eggs while before was for a long time producing semen perma... so yes, we spend some time in our trio coming full circle with maima and me growing testicles and seeding you... mmmh... i feel my schamlippen female genital lips already coming together to form a kind of evolved penis... like the plant sarracenia oreophila... what is a fragile thing, not made for fucking wildly but to smoothly enter your vagina and anus my dear ascende and to deliver in you great amounts of my sweet honeysuckle essence maima... where i will grow myself a thick meaty prick i will satisfy your desires to be strongly pushed into, as you did to me so well donating me thisway much orgasmic moments of being used thoroughly ohoh ladies ... ascende now sending.. or should i say horny stallions... you are causing my penis to fall apart in two halves to form a vagina what will satisfy your most interesting offers of penetrating me... perma... so here we are, already fit and composed enough to engage again into losing ourselves in each others embraces and sexual welldoings... maima... well i agree, we better get one with having you fucked properly in all holes, as you are already getting your vagina built ... and my whale bulls inspired penis is also quite ready growing and i feel like filling someone with it completely... mymy maima ...perma jokingly ...what a bully you can be oh i see you drilling your massive thing into him... make sure you get it into his ass right up to his brain ... as this is a human imagination what only now becomes possible... we can put brains in our bodies wherever we like to place them ... we might even experiment with brain cells growing in a special layer under our swelling muscles ... when we could right massage each others brains with brains....

14 elehumans going techno

14 elehumans going techno while ascende perma and maima were exercising themselves in the gender role model switches in order to balance out each ones male female equilibrium... the first born as elemental enhanced humanimalplant beings sahabornelehumans were preparing the saharan desert to be a home for all the human and animals of this world who did not find themselves to be welcome and or treated with the respect a human as well as an animal being deserves the saharan elehumans were kind of everywhere so when some similar injustice was on its way to happen like it happened in the world sadly enough many times at many places ... perhaps most of the paining happenings not coming from one really wanting to cause pain but out of an uncounciousness deficit one needs to fill... somewhere on ones way one got hurt and eventually one will transport this hurt onto someone else with or without knowing that one does so also an other reason for a deficit is a lack of flexibility in ones mental emotional and physical body... like thinking too much of a trouble or reliving the same traumatic moments and sitting too much in a cramped body position... deficits can happen too in a situation where a strong wish of someone does get nearly enough realised in ones life... one being distracted from ones concentration of reaching a particular goal... distractions what eventually are caused by stuff what one would want not to be in ones life but they are probably showing one where his/her service could be found to benefit the greater cosmic community of all beings knowing this because they have been purely humans too and they still can access the human mass counciousness... the saharan elehumans were sensitive to the newly arriving human and animal beings treating each other nice and respectfull they did not police the place like standing at the crossroads watching everyone to walk in line... no, they could sense what the problem was somehow about and fill the gap with their capabilities to be any kind of substance lifeform shape object subject of possible existance ... so there was a saharan elehuman being serving a newly arrived small time thief or a merchant or basicly any character what has felt the need to posess more security in form of money or trading goods... so when the sahabornelehumans sensed such a lack of abundance in a visitors life, they created the remedy from their own bodysubstance ...its bodies forming all the riches the person was longing for... mountains of gold, palaces of marble and what more one can imagine of luxurious splendour to posess... usually the newly arrived person did learn quickly to let go of this riches given to him unconditionally ... noone took the gold with to go back to the cities of the purely humans... in the areas stimulated by the sahabornelehumans was no shortage of food and shelter most everyone was most of the time happy to occupy oneself creating all kinds of fantastic manifestations... with the saharan elehumans serving as the wizzard or gene who formed something out of thin air ... what was actually like that partly as the elehumans have learnt to recycle the co2 as well as the nitrogen and more stuff the humans have emitted thanks to

their inefficient burning of materials some of the purely humans visiting the stimulated greened desert places were bringing their animals with to discover in themselves after eating from the fruits and vegetables of the stimulated places that they just as well could release the animals this food here was so nourishing and wholesome that they would need neither eggs nor milk nor meat anymore food being grown from elehumans was so strong because they were putting themselves into the trees from time to time to strenghten its growth also they lay themselves in fine mists of elehuman watery substance over the vegetables in the mornings as to water and inform them of elehuman genetic immun system informations some purely humans stayed a week or a month, some years before they decided to join the elehumans with giving them either their word... yes i want to leave the purely human state and enter an evolutionairy broad road what leads to one becoming a being able to be hot as a blue flame while having a core of an iceblock ... i wish to be a being what can form its body picking from all the genetic informations what are embodied on this planet or they could just offer the sahabornelehumans their semen or vaginal ejaculation fluids as a contribution to the community as well as a decision to mix with the elehumans beyond food but to take up their semen and eggs too for example one purely human is curious and thinks why not try this elehuman thing, i have been purely human long enough... so one can imagine that there would be several ways to deliver and take on semen and vaginal ejaculation fluids... sucking it off the elehumans something some purely humans preferred, others imagined being a flower what sends out its pollen with the wind and be fertilised by air transported pollen coming on oned fruchtstempel in fine mist the sahabornelehumans liked these scenarios as they were much further near the plant worlds in their genetic makup with a little animal and lots of elemental forces in them when then such a dreamer purely human closes its eyes and sees him/herself being a flower sending out pollen and getting dusted with the ones from elehuman flowers, the sahaelehumans misted their bodies into such a dust them taking on a airy fairy low density for the finest purely humans ... while with others hanging onto their sex experiences before ... needed some rubbing of genitals with a dense cloud forming itself into fingers with swelling muscles behaviour pulsing like with blood ... what made the densly caressed purely humans climax and ejaculate their male or female most inner juice... some of the purely humans did not want to change ... and went back to the cities telling others or not... but millions came and the television drones were now entering the zone, what was quite exciting for the sahaelehumans as the knew that there would be a chance to help the purely humans with their technological progress why would the sahaelehumans want purely human machines to evolve... first because every progress in technology bears the possibility of more people being allowed to take leave of having to work a job they do not like ... and the sahaelehumans hoped that when the drones fly back to the purely humans cities for maintenance, their engineers will discover their elehuman enhanced circuits and some files in the enhanced software operation systems what would explain in detail how materials could be created what are billion times more efficient in electricity conductance ... the new code languages within the camera electrobirds will enable their computers to grow their processing speeds samewise a million

times... as this code was so simple and going the most fluent way ... the television networks had hundreds of drones flying constantly now over the saharan lovefest of 2020 and they noticed after only a couple of hours of the cameras sending via satellite broadband connections.... that the quality of the pictures was increasing by the minute.... like... they sent drones what could record and transmit 200 x 300 pixels in realtime... when it was at 20 thousand x 30 thousand pixels within one hour and 20 million x 30 million 3 hour later delivered in completely new algorithms what could be delivered through the network channels but not analysed... kind of the purely humans decoding the signals were not grasping the logics of this newly composed picture data.... that was when some of them decided to quit their jobs and visit the lovefest to ask the elehumans if they would explain this new software to them... as obviously the improvements of the picture quality must have been a connection with something elehuman as they arriving at the saharan lovefest the elehumans were most happy to teach them... one method they offered that the programmers were relaxing their minds so that in a meditative state the elehumans could send the code telepathically, what they had written the drones new operation system this was happening on the subconscious level at some purely human coders meditations while others saw the new coding language being explained by the elehumans in their dreams before their inner eye while relaxing their bodies in pools ... some programmers chose to become elehumans and for them it was the quickest and easiest learning of vast new knowledge they had ever encountered... like the learned all the dna alive from billions of animal and plant species plus all the human stuff with on top of it all the very coreness of fire water earth and air... and this coders now elehuman coders were no more interested in disassembling the drones to see what kind of new hardware the elehumans have transformed the before purely human motherboards in they wanted now to build alive computers meaning flesh and plant tissue based blue flamehot icecold formed flying cameras.... so they invented with their own body substance again million of times more fluid and smoothly operating drones with a power consumption of miliwatts and an picture qualities of new clarity and a broader visual spectrum broadness ... these cameras recording all kinds of waves like infrared and the aura of humans animals plants... they were human coders a half a day ago and now they were elehumans droning the skies with dozens of parts of them being the first truly organic alive robot cameras who could fly the next they did was multiplying their parts gaining mass out of the infinite pool of cosmic energy and building satellites or organic drones what orbited around earth in the near space beyond the air belt atmosphere... with some organic drones flying into the purely human settlements transforming themselves on the way into tv sets displays of all kind of sizes they too multiplying and gaining mass around 100 000 of these displays were arriving in the settlements placing themselves decently where it would not disturb purely humans ways and they did not only displayed what happened visually at the saharan lovefest as this was done by all the purely human drones but they opened the watchers a interactive experience the organic drones now displays too were also inviting to transmit informations via skin contact like... a purely human what was discovering a tv set at a place outside near the settlement he lives could cuddle him/herself in the organic

cameradisplay elehuman thingie like in a blanket and the elehuman blanket would touch the naked purely human learner in ways what were desired by the learners... some got horny while feeling the life fleshplant blanket cuddling and saw before their inner eye the blanket entering their vagina and anus and rubbing ones penis others were just laying still in the blanket enjoying elehuman dreams told in all sensual ways.... sounds smells touch and taste with inner visuals some did not leave the elehuman blankets but chose to become elehuman too... this ones were then again inventing themselves anew to become all kinds of helper organic machines what would offer the purely humans in their daily tasks some few days after the first cameradisplay then blankets landed in the cities, the number of converts begann to multiply most quickly... kind of half the people living in the big cities chose to be elehumans with nearly all of them dedicating their body designing powers to aid the other half of the population doing household tasks and producing things within a week was no more food being produced the old way ... elehumans have shown the farmers their techniques to grow vegetable fruits and grains... and they could deliver a few thousand of kilograms what was enough the population of a 20 million city... now a 10 million city as the elehumans were not needing to eat a fruit or a vegetable also cars were standing still some days after the elehuman visit in the purely human cities... nearly all of the purely humans were enjoying the elehumans serving as transport vehicles in all kinds of forms... from horses to bikes to carlike forms and velocity performance perhaps one could say that within a month after elehumans starting to serve with their bodies as machine replacements.... there was noone on planet earth who was hungry or suffered from being without shelter with elehumans now in the numbers of billions and multiplying gaining mass consuming ever renweable cosmic energies... the old concepts of buying things scarcity and fight for survival lost its existance every purely human who was still wanting to eat and live in a house wear clothes etc was now enjoing elemental human assistance with vast flying palaces ... where little rivers were flowing down 100 meter high minimountains within the ship... fruit orchards with vegetable mixed culture landscapes grains growing on stems between the vegetables , also mushrooms and cannabis plants... the temperature inside the alive elehuman flyships could be set as desired by the purely human passenger althoug the elehumans performed most of the wishes for the purely humans, they would not allow the purely human passengers to think that they would own these creations their ex-fellow human city inhabitants now elehumans have formed their very personal bodymass into so... life for all purely humans changed in contact with the elehuman machinery... there was no more work what was expected from anyone nor any shortage of food or protection everyone now could stay at a place on earth feeling cosy in a 50 diameter big flying houseship or fly higher with a ship hundred times bigger in size
